

The Cisco 15327 is one of the first metro edge optical transport systems available, combining multiservice on demand with SONET/SDH and integrated optical networking.

We currently have our Cisco 15327 configured in ring with the 15454 systems, enabling us to test the full compliment of interfaces available to the 15327, in addition to our normal battery of tests completed with communication analyzers and SONET testing.

Below is a list of equipment we have successfully repaired.

- XTC-28-3
- XTC-14
- MIC-28-3-A
- MIC-28-3-B
- E10/100-4
- G1000-2

- OC3IR41310
- OC12IR1310
- OC12LR1550
- OC48-I13-T
- OC48LR1550
