

XTech Gear is able to provide testing and repair services for Carrier Access Widebank 28 controller cards, chassis, and ds1 modules.

The Widebank 28 provides 28 DS1 channels multiplexed into a single DS3 channel. Contained within a 1U chassis, this enables you to install 40 Widebanks into a single 19 or 23 inch rack for a total of 1,120 DS1 circuits. CAC Widebank 28 also provides 1+1 or 1:1 DS3 protection and 1:7 protection on the 4 port DS1 cards, so you are guaranteed maximum uptime and efficiency if a card becomes defective or during routine maintenance.

We routinely repair Widebank 28 controller cards, chassis, and DS1 interface cards. If you have questions concerning our testing and repair capabilities, please feel free to [contact us](#) .
