XTech Gear, Inc was originally founded in 1999. We started off with a handful of employees, who were dedicated to building a communications equipment company from the ground up the right way. As our company steadily grew and our operation expanded to all levels of the telecommunications industry, weadded an additional inventory facility in 2004. Here we could house our wide range of communications equipment as well as implement new services such as testing and repair and an enhanced inspection process for all equipment that moved through our material process.

Since then we have experienced rapid growth. In 2006 we moved all operations to a brand new and much larger office and warehousing space, and completed construction of our custom testing and repair facility. Since then we have continued to rapidly grow, adding communications specialists and customer support staff to ensure that any customer dealing with XTech Gear receives the best possible experience.

We have continuously implemented new systems in our testing and repair center; on average two new telecommunications systems come online every month. We have expanded our product line expertise from telephone central office and backbone data networking to include all levels of equipment including customer premise equipment and VOIP.

 We are constantly evaluating and innovating in a marketplace where things change on a daily basis. If you believe that there is anything that XTech Gear can do to assist you, we would be glad to help.
